To Create an Image Pop-Out (Modal) with Styling and a Caption

1. Paste this block to the top of the body field. You only have to do it **once per article**:

```
<link href="/ext/resources/css/AR-Article-and-Page-Styles.css"
rel="stylesheet" />
<script src="/ext/resources/files/Image-Modals.js"></script>
<div id="imageModalBackground" onclick="backgroundClick(event);" >
    <div id="imageModalClose">&#x2715;</div>
    <img alt="Image in modal." src="data:," id="currentImage" />
</div><!-- End imageModalBackground. -->
```

2. This is a typical image/caption block you can copy, paste, and alter for each image.

```
<div class="xxxxx">
<img class="modalImage" onclick="showImageModal(this.src);" alt="yyyyy."
src="zzzzz">
<p>Your caption goes here.</p>
</div>
```

2A. **Change xxxxx** to either **fullWidthDiv**, **asideLeft**, or **asideRight**.

- **fullWidthDiv:** Displays the image/caption block full width, with just a tiny bit of margin on the sides.

- **asideLeft:** Displays the image/caption block to the left of the paragraph beneath it. It becomes full width on narrow screens.

- **asideRight:** Displays the image/caption block to the right of the paragraph beneath it. It becomes full width on narrow screens.

2B. **yyyyy** is the alt tag. This must be a simple description of the image – just a few words. It is **required** for search engines and is read out loud by the browser's sight assistance service.

2C. **zzzzz** is the image file path and name. You can get it from the media uploader. **The domain must be removed** (everything before and including .com). It should look like `src="/ext/resources/…"`

To Add a Caption

Any paragraph *within* a div that has one of the above three classes will automatically be styled like a caption – smaller, dark gray font. No inline styles needed. It can go above or below the img tag. Any text *outside* a paragraph will be styled like the article body.

Side-by-Side Images

To set images next to each other, wrap each in a halfWidthDiv, and place those within a fullWidthDiv.

Caption options:
- You can place a caption under each image within the halfWidthDiv.
- You can place a single caption under the halfWidthDivs. See code below.

Numbered images:
- To add a number under an image, place a
 (for a linebreak) under the image followed by the number. Please note a <br> is just a linebreak, not a wrapper, so it does not need an end tag.

```
<div class="fullWidthDiv">

     <div class="halfWidthDiv">
     <img class="modalImage" onclick="showImageModal(this.src);" alt="yyyyy."
src="zzzzz">
     <br>
     1
     <p>Your caption goes here.</p>
     </div>

     <div class="halfWidthDiv">
     <img class="modalImage" onclick="showImageModal(this.src);" alt="yyyyy."
src="zzzzz">
     <br>
     2
     <p>Your caption goes here.</p>
     </div>

     <p>Optional caption under both images.</p>

</div><!-- End fullWidthDiv. -->
```
